PREVENTION, RECOGNITION AND TREATMENT OF HEAT ILLNESS

by Dr Martin Euk, Force Medical Officer

Summer is well under way in Cyprus at the moment, and the months from June until end of September are very hot. People not used to living in this climate zone may experience difficulties in dealing with this environmental factor. Thus, here follows some information about prevention, recognition and basic first aid of heat illness.

Heat illness occurs when the body's heat regulating mechanism becomes overloaded. To prevent heat illness, it is important to understand how the body keeps cool.

How does the body keep cool? The most important way for the body to keep cool is by the evaporation of sweat from the skin. Sweating, in itself, does not cool the body - the sweat must be able to evaporate and take heat out of the body in the process. Therefore, the most important factor in the prevention of heat illness is water.

How do I know if my body is lacking water or is dehydrated? There are two reasons as to why the body may lack water. The first is by starting off already dehydrated. This is the first time to occur in the early morning when you have had nothing to drink overnight. It will be made worse by drinking alcohol the previous evening. It can also occur later if you have had little to drink during the day. A hint is to pass the CPT - the 'Clear Poo Test'. If your urine is clear and water-like, you are well hydrated; if it is becoming dark, like apple juice or even darker, you are already dehydrated.

HEAT STROKE

Rapid onset, serious condition

Cause: breakdown of the body's heat regulating mechanism

Symptoms:
- Body temperature > 40°C
- Skin red, hot and dry
- Harsh, loud breathing
- Unconsciousness and convulsions may be present.

First Aid:
- Rest in shade, loosen clothes, seek body in water with fan constantly
- Provide cool liquids (only conscious patients)
- Seek medical aid

HEAT EXHAUSTION

Slow onset, less serious

Cause: loss of body water and salt

Symptoms:
- Body temperature normal or increased
- Skin pale, cool and with perspiration
- Normal breathing
- Dizziness, delirium, nausea and cramps may occur

First Aid:
- Remove patient to a cool place
- Loosen tight clothing
- Give cool, salty drinks
- Seek medical aid

The second reason for dehydration is not drinking enough during exercise. Hard physical exercise will result in up to one litre of sweat being lost every hour. When the body has lost one litre of body water (sweat), it will start to develop signs of heat illness. The brain will function more slowly and the muscles will not be able to work as well. So replacement of fluids is essential. You cannot drink too much water - you will get rid of all excess in your urine.

How do I recognise Heat Illness? The early signs of heat illness are weakness, exhaustion, sweating, aches and pain, as well as nausea. As the condition worsens, there may be an obvious rise in body temperature, the skin will become flushed and then pale; dizziness and confusion may occur; vomiting may start; the breathing and pulse rate will be rapid; collapse will eventually occur, followed by loss of consciousness.

What shall I do in case of Heat Illness? Generally, first aid treatment should be started as soon as possible. The casualty should rest in the shade or any other cool place. Remove clothing and soak him/her in water. Fan vigorously to help the water on the skin to evaporate. Give lots of water to drink - if he/she is nauseated or vomiting, it is best just to give sips of water. NEVER GIVE WATER TO UNCONSCIOUS PERSONS. Call for medical help and continue the treatment until it arrives.

Below is a summary of the most common types of heat illness and the treatment.

HEAT CRAMPS

Slow onset, not serious

Cause: lack of salt in the body

Symptoms:
- Attacks of cramps in almost any part of the body
- Extreme pain is experienced

First Aid (= Prevention):
- Additional salt should be taken in solution, or
- Electrolyte drinks administered

The Blue Beret August 1997

EDITORIAL
"This is my pledge to you, and the world: that starting today, we begin a quiet revolution in the United Nations". This was said by the Secretary-General, Kofi Annan, just few weeks ago in New York when he introduced a package of measures aimed, among other institutional, cultural and managerial changes, at creating a United Nations with a leaner and more cost-effective structure. This edition of the Blue Beret carries an article which explains the character of the proposed measures, offered by the Force's Chief Administrative Officer. We would like you to read it carefully, as it projects vital changes which will find their way through and will be transformed into the daily life of UNFICYP.

Savings, efficiency, cost-effectiveness, managerial improvements, cuts, belt-tightening - these are notions which are repeatedly stated upon in our daily activities. The question, though, remains as to whether we implement them seriously, carefully and steadily enough. Have we always thought exhaustively about the changes we have made, and of their consequential short- and long-term effects? How often have we implemented and proudly announced new sectoral measures, only to find that they backfired later because their immediate effects proved to be very different to those detected in the long run? How often have we confused the basic difference between cuts and economy?

The "Quiet Revolution in the United Nations", as proposed by the Secretary-General, imposed upon us all very serious, far reaching and most responsible obligations. In order to meet the challenges of the 21st century, our Organization is undergoing a process of radical changes. In order to meet them, implement them effectively and add to them, we, too, have to change.
In a bid to enhance overall efficiency of the UN and prepare it for the challenges of the 21st Century, Secretary-General Kofi Annan unveiled a package of extensive and far-reaching reform measures calling for bold institutional, cultural and managerial changes.

The Reform proposals encompass the five core missions of the United Nations around which the Secretary-General has already restructured the Secretariat’s substantive work programme: peace and security; economic and social affairs; development cooperation; humanitarian affairs; and human rights.

Mr. Annan said that in formulating his proposals he had one goal in mind; to transform the Organization and to bring greater unity of purpose, greater coherence of efforts, and greater agility in responding to an increasingly dynamic and complex world. He said the UN had to achieve greater efficiencies and deliver more value, even as the demand for its core services in peace and security, and development continued to increase.

“The reform of the Secretariat administration and budget discussed today, and any further recommendations made to the General Assembly, will create a United Nations that has a leaner and more cost-effective structure, a budget that is more committed to solvency and development priorities, and a management that is better coordinated and accountable”, said the Secretary-General.

Mr. Annan’s measures to enhance UN cost-effectiveness include the merger of three UN departments in economic and social affairs, and budget for 1998-1999 that implements the cutting of 1,000 Secretariat posts. UN programmes in fighting crime, drug trafficking, money laundering, and terrorism are to be combined in Vienna under one administration.

In another vital area of UN activities - promoting development and addressing the root causes of poverty and conflict - he proposed to consolidate UN funds and programmes in a United Nations Development Group. He also called for simplification of UN personnel administrative rules and 30% reduction in documentation. He also wanted to end the persistent state of near-bankruptcy in which the Organization had been living for far too long. He proposed that Member States establish a Revolving Credit Fund, initially at a level of up to $1 billion. He stressed that assuring the Organization’s financial viability was a condition for the very success of reform.

Specific measures to refine leadership and management included setting up a cabinet-style Senior Management Group and a recommendation to the General Assembly to establish the post of Deputy Secretary-General who would spearhead efforts to raise financing for development and ensure the coherence of the Organization’s cross-sectoral activities. The Secretary-General stressed that his programme of reform affected virtually every department and every activity of the United Nations. “It contains proposals for increasing the speed with which we can deploy peacekeeping and other field operations. It focuses on our capacity for peacebuilding, advancing disarmament agenda and strengthening the environmental dimension of the United Nations activities”, said Mr. Annan.

Reform, he added, entailed certain changes of a more fundamental nature, which could be undertaken only by Member States. Some of these changes relate to the General Assembly, he said, suggesting that the Assembly focus its work on issues of highest priority and reduce the length of its sessions. “Perhaps most significantly, I urge this Assembly to consider adopting a new system of budgeting - a shift from input accounting to ‘results-based budgeting’. This approach, which many Member States already use at the national level, would give the Secretariat greater flexibility while maintaining strict accountability”.

The UN, he declared, stood at the threshold of a new beginning. “This is my pledge to you, and to the world: that starting today, we begin a quiet revolution in the United Nations”, he said. He emphasized that the reforms he was proposing would allow the United Nations to do even more, even better. “They will allow us to rise to the occasion of the age of global opportunity and make the United Nations truly the expression of humanity’s highest aims”, said Mr. Annan.

Excerpted from Secretariat News Reform Special July 1997
The Humanitarian Branch in UNFICYP’s Headquarters is a small organisation which performs a major and important role for the benefit of the people of Cyprus.

Its responsibilities involve the implementation of Force policy, coordinating support for inter-communal activities under the Force Commander’s direction and acting as the link in dealing with authorities on both sides, always bearing in mind the welfare of the Cypriot population and the necessity to return the Island to normal conditions.

The main area of responsibility for the Humanitarian Branch is to provide support to those groups of people living in areas controlled by the other community and to encourage the two sides to cooperate more directly with each other in the humanitarian field.

The number of Greek Cypriots remaining in the area controlled by the Turkish Cypriot authorities is now 475, of whom 473 live on the Karpas peninsula with the remaining two in Kyrenia. In the Kormakiti area, there are 177 Maronites, with 360 Turkish Cypriots living in the south, mainly in the Paphos, Limassol, and Larnaca areas.

UNFICYP’s humanitarian commitment is to ensure that these groups receive at least the basic needs in terms of food, medical care and family contact.

This is never an easy task and, since Hum Branch deals with individuals, it presents a wide range of issues which, at times, are difficult to solve within the framework of the Cyprus problem. Some of the humanitarian activities are as follows:

1. Permanent and temporary transfers from one side to the other;
2. Coordination of family meetings;
3. Coordination of medical evacuations for emergency treatment;
4. Purchase of medicines in the south on behalf of the ICRC in the north;
5. Provision of food, medicine, clothing and fuel to the Greek Cypriot and Maronite communities living in the area controlled by the Turkish Cypriot authorities;
6. Welfare visits to members of both communities residing in the area controlled by the other community;
7. Disbursement of social welfare and pensions to Greek Cypriots residing in the Karpas area;
8. Coordination of funerals in both communities when the body is transferred or the relatives request transfer from one side to the other to attend the funeral;
9. Transfer of mail;
10. Facilitation for the processing of visa applications for Turkish Cypriots by accredited embassies;

11. Visits to prisoners of one community serving sentences in prisons run by the other community;
12. Coordination with health authorities on both sides in an effort to prevent the spread of diseases in the Buffer Zone.

Most of these activities take place at the Exchange Point of the Ledra Palace Hotel, which is staffed and run by the Australian Civilian Police with whom Hum Branch enjoys a close working relationship. A similar rapport applies to the Irish Civilian Police, who are responsible for the eastern part of the island, and who conduct the money run to the Karpas area on a monthly basis.

The second area of responsibility for UNFICYP’s humanitarian staff is to encourage the economic development in the BZ and, indeed, on the island by liaising and ensuring the fair distribution of public utilities such as water and electricity, and to ensure that supplies are distributed as equitably as possible.

With regard to the BZ, the humanitarian task is to encourage and facilitate the post-1974 “civilian use” of the BZ, including commercial and industrial enterprises and farming in selected areas. UNFICYP’s Hum Branch is the authority that may grant permission for activities to proceed within the BZ, provided certain criteria, such as security implications and ownership, are complied with.

Lt Col Jorge Tisi Baña, who has been the Chief Humanitarian Officer since July 1996, is supported by a team of humanitarian personnel who are hard-working, professional and enjoy an excellent working relationship within the Branch. In addition to the normal staff work, the CHO and Staff Officers (SO2 Coord and SO2 Hum/Econ) are engaged in liaison and negotiation duties with various authorities, agencies and individuals.

Attached to the Hum Branch is a Police Officer from IRCIVPOL who acts as POLOPS (Hum) and liaises with the Cyprus Police (CYPOL), the Turkish Civilian Police Element (TCPE) and UNCIVPOL.

The SSA (Social Sciences Assistant) is not only the Branch’s interpreter; through her experience stemming from continuity, she also provides the link with individuals of both communities with whom she has built a bond over the years. This helps the Branch to perform in an atmosphere of confidence and excellent cooperation with those it works for.
A Brief Encounter with the Cultural Heritage of Cyprus - Part XII

Few cities in the world can boast of such a long history of continued occupancy as the ancient port-city of Kition in Cyprus. Founded in about 1300 BC, it is still going strong under the name of Larnaca.

Excavated parts of this old city allow us an insight into its rich past. Established by the indigenous Cypriots, reconstructed by the Achaean settlers, occupied by the Phoenicians for many centuries, dominated at times by the Assyrians, Egyptians and Persians, liberated by Alexander the Great, it was abolished as a kingdom by the Egyptian Pharaohs in 312 BC. All these dominations have left the hallmark of their own civilization.

Despite its eventful history, the city developed into a prosperous industrial and commercial centre, as shown by the architectural remains and the rich finds exhibited in Cypriot and foreign museums.

**History**

The entire city of Kition (Citium in Latin) lies beneath the modern town of Larnaka on the south-east coast of Cyprus. A British excavation last century and a Swedish one in 1930 showed Kition to be a Phoenician city of the 9th century BC. However, recent excavations by the Department of Antiquities revealed that it was an indigenous Cypriot establishment of the 13th century BC, and in addition, the French University of Lyons unearthed Kition's ancient port in the 9th century BC.

In the 13th century BC, Kition was fortified by a mud-brick wall, reinforced by large, rectangular towers and possessed two temples and copper workshops. Rich tomb finds included some imported artifacts, indicating an excellent state of trade relations with neighboring countries, even at this early age.

Unsurprisingly, Phoenician merchants were attracted to Kition. They were followed by Achaean settlers, fleeing from Cyprus to the eastern Mediterranean in the 1st millennium BC. Kition developed into an important trading centre.

The Achaean settlers not only brought a new language and new blood to Kition, but also spread the influence of the Achaean traders and commerce to the city. Copper-smelting workshops, with copper ores from nearby mines were brought by sea to be refined and exported in ingot form, Kition developed into an important industrial centre.

The Achaean settlers introduced radical changes. They replaced the city wall with a stronger one, built of ashlar blocks and changed the town plan. An earthquake destroyed Kition around 1075 BC, following which the city was rebuilt. It continued in existence for some years before this site was abandoned in about 1000 BC for another one closer to the sea, either because the navigable channel linking Kition to the sea was destroyed by silting over, or because the Phoenicians began to arrive. They took over the city in the middle of the 9th century BC, and Kition prospered enormously under their rule.

The names of the Bronze Age city and that built by the Achaeans are not known. The name "Kition" was given by the Phoenicians and, as such, is referred to by classical writers when they write about the Cypriot kingdom.

Most of the information available about the city after 312 BC derives from literary sources and inscriptions. According to them, Kition possessed important architectural monuments, and as for the Phoenicians themselves, they excelled in both the arts and the sciences. Zenon (335/3 - 263 BC), the founder of the Stoic school of philosophy, was born here.

**Description**

As archaeologists were restricted to digging in non-occupied parts of Larnaca, the excavations so far cover only five areas which are situated as follows:

Area I is in Kimon Street
Area II is off Pamploula Street
Area III is in Chrysopolitissa Street and Area IV is north of Kition Street. They can all be seen from the street. The port of Kition lies in the harbor of the Museum, which is worth seeing as it contains finds from Kition.

Area II is open to the public, and comprises the religious and industrial quarters of the city with four temples, two holy precints and three copper-smelting workshops. A fifth temple from the 13th century is only slightly visible.

This complex constitutes one of the most spectacular architectural monuments of Cyprus in the late Bronze Age. Extending to 50 metres from east to west, it demonstrates by its plan and execution a great technical dexterity in architectural matters.

The proximity between the religious buildings and the copper-smelting workshops suggests the worshiping of a copper deity. This is supported by the finding of two 12th century BC bronze statuettes on ingot bases, the Ekkomi Ingot God, and the Bromford "Astarte" at Oxford Ashmolean Museum.

**The Temples**

**Temple 1**

Built by the Achaeans, Temple 1 is the most magnificent of all. It had two monumental entrances to the courtyard. The hypostyle hall consisted of three small room, each individually entered from the courtyard. A walled corridor along the inside of the south wall was probably used for religious processions. Stairs are visible on the outer façade of the south wall, made of large and roughly dressed stone, with crude representations of various ships.

The shrine was reconstructed by the Phoenicians with major modifications on the same foundations. The small temple became a huge and impressive temple of Astarte (their equivalent of Aphrodite), which measures 35 m x 22 m. The two porticoes supported on four rows of seven pillars (28 in total), of which only the bases remain.

This temple was burnt in 800 BC and rebuilt with two rows of six pillars. Benches along the inside of the north and south walls were built for deposit of offerings.

**Temple 7**

Originally built in the 13th century BC, Temple 7 had a courtyard divided by two rows of three columns of which only the rectangular bases remain. A hearth altar was situated at the head of the aisle. This temple was rebuilt with ashlar blocks by the Achaeans, who retained only the northern portico. A southern entrance was added onto the street side in the south.

**Temple 4**

Only the stone foundations of this Achaean Temple remain. Two stone column bases are found in the courtyard. The adytum comprises two small rooms, where many important finds were revealed including iron objects such as a large plaque of the Egyptian goddess and a pipe for smoking opium. Some of the objects were impressed in the yet undeciphered Cypro-Minoan script. Following the earthquake, an altar was built in the centre of the courtyard.

**Temenos A**

Temenos A contained the west to a rectangular altar of ashlar blocks. At the base of the altar there is a limestone block carved in relief of a procession of horses, which are reminiscent of Mycenaean symbols. A low, round, cement altar nearby was probably used for animal sacrifices, since ash and carbonized bones were found on it.

**Temenos B**

Temenos B contains two stone capitals with stepped profiles and two column bases.

**Copper-Smelting Workshops**

Three adjoining workshops are situated west of Temenos A and north of the western half of Temple 1. They were large, rectangular rooms deprived of roofs in order to let escape the poisonous fumes of copper-smelting.

They communicated with Temple 1 and Temenos A (religious reasons).

All areas are in the vicinity of the archaeological museum.
FOCUS ON THE FORCE PHOTOGRAPHER

The time has come to zoom in on the man behind the lens - Force Photographer Sgt Robert (Bobbie) Lipsett. Bobbie arrived in Cyprus with No 5 Camp Command IRCON on 20 March 1996. For reasons beyond his control, he has since accepted extensions with No 6 and No 7 Camp Commands, and is now on course to becoming the longest serving Irish NCO in one single tour with UNFICYP. He will then return to his appointment in the Military College in the Curragh in Ireland.

Bobbie’s artistry has been adorning the pages of the Blue Beret magazine since his arrival. His work, by its very nature, is always very much on public display. He possesses a keen eye for the “out of the ordinary” shot. He is dedicated to his profession and is very much the perfectionist when operating in his studio.

Bobbie is to be found at all newspaper worthy events in the mission area including training activities, exercises, VIP visits, incidents etc. He is particularly adept at working away in the background getting his “scoop” without intruding into the event being covered. It is testament to his professionalism that some people only discover that they have been photographed when they read the Blue Beret. His hallmarks have always been courtesy and cooperation.

Examples of Bobbie’s versatility are numerous and his portfolio spans the entire spectrum from action shots to studio portraits. It is a tribute to his work that photos which appear in the Blue Beret are often sought by other publications for reproduction in some of their features. Bobbie’s expertise is the source of much pride for IRCON in general and Camp Command in particular.

Bobbie in action!

Bobbie has completed 21 years of service in the Irish Defence Forces, and has served with the UN on four previous occasions with UNIFIL (Lebanon). He is single and comes from County Sligo in the west of Ireland. Apart from photography, his hobbies include swimming, fun running and music.

DRAGON FIRE

This article is not about the last Firing Camp, as perhaps the title would suggest. It is about Battery (The Dragon Troop) RA and the bonfire.

On 9 June 1997, a fire started in a reed bed in Line Battery West’s area of responsibility, south of UN 55. The fire was quickly reported to UN 51 Kingston by the OP sentry at UN 55.

The Quick Reaction Force (QRF) from Majoree Troop was immediately deployed to the scene, accompanied by fire beaters and water jerricans in an attempt to extinguish it. At this stage, UN 51 had also informed both the Greek Cypriot and Turkish Cypriot fire brigades.

Also on the scene were the Asst Ops Offr and the Ops Info Sgnt from Kingston, who happened to be in the area at the time. Together with the QRF, they tried to prevent the fire from destroying the temporary OP at UN 56. This was barely achieved, but only after several retreats from the ferocity and heat of the fire.

After four hours, the flames were finally extinguished, apart from some “hot spots” which had to be monitored. The fire burned a strip of the Buffer Zone measuring approximately 600 m by 300 m. Unfortunately, the lavatory at UN 56 was completely destroyed, even after valiant attempts by the Battery Commander and others to save it.

However, this was a lesson to be learnt - fires are nearly always extremely fast and dangerous and it is imperative that all UN personnel are aware of this fact in the hot summer months.

E-MAIL KEEPING AUSTCIVPOL IN TOUCH

The stress of working thousands of miles from our loved ones has been alleviated to a certain extent for many of the AUSTCIVPOL contingent with the introduction of the e-mail system.

The e-mail system allows members to communicate with their families and workplaces back in Australia. It also provides a direct point of contact between persons, allowing important news to be shared instantaneously.

There are two terminals currently connected to the e-mail system available for use by AUSTCIVPOL members in Cyprus. One is situated in the Administration Office at the UNPA, and the other is in the Operations Office at the Ledra Palace Hotel. Members of AUSTCIVPOL have living accommodation at both these locations and, as such, access to the systems may be utilized after office hours.

The e-mail system also allows members isolated from the workplace to receive timely information regarding news in the police gazette, assisting with information required for position applications, transfers, etc. The Internet system gives members an opportunity to access information concerning world news events, research material for projects - in fact, anything at all. The choice is limited only to the imagination of the user.

FIRE PREVENTION IN SECTOR ONE

The Humanitarian Branch of Sector One, led by Maj Lavia, is responsible for planning and checking the execution of fire prevention tasks in ARGCON’s area of responsibility. During summertime, fire prevention is one of the most important points of concern.

Three meetings were recently held with officials from the Ministry of the Interior, the Ministry of Agriculture and also the Forestry Department. Subsequently, fire breaks were set up all along the Buffer Zone in Sector One, some of them in dangerous mountainous areas.

For Sector One personnel, there were several additional aspects of this assignment. The works on the ground were preceded by the issue of passes to the workers, and UN escorts had to be provided by personnel on the line. The TF Liaison Officer was constantly kept informed of the activity within the Buffer Zone, and, of course, a very detailed récits was carried out to know where the trails and fire breaks would run.

Finally, fire breaks were installed by the crews in the various Observation Posts and Patrol Bases surrounding all ARGCON’s installations along the line, under the supervision of Sector One’s Fire Officer.

It is hoped that fires will not start, however, in the event that one does break out, provision has been made in Sector One to deal with such a situation. It is vital for all to be aware of the danger to human life and to the environment, a lesson sorely learnt from the damage caused by the biggest fire ever in the Kyrenia area in 1995.
TRAINING IN SECTOR ONE

On Thursday 26 June 1997, ARGCON conducted an impromptu Evacuation Exercise. Since only a handful of people had been informed, most of Sector One's personnel were carrying out their normal duties within the Camps and Ops.

At 08:30 am, the Ops Officer in San Martin Camp, Maj Dietrich Tonazzi, was ordered to initiate the exercise. It started with an Ops Branch brief on action to be taken by a Company Commander to abandon UN installations under his responsibility, if the need arose. The whole Sector took part; however on this occasion, Marines Coy was selected to execute the evacuation.

Personnel were informed about the operation over the loudspeakers. Everyone reacted immediately and, one by one, the soldiers with their equipment prepared themselves to leave the Camp. At the very start of the exercise dress, kit and special equipment were issued in accordance with standing orders. Then at 10:15 am, the second step began with the first group of personnel boarding the vehicles.

ARGCON ENGINEERS

The Engineer Platoon has been fully occupied during its tour with UNIFCYP, but the last four months have been exceptionally busy. A considerable effort was necessary to improve accommodation, electrical installations, plumbing, many repairs and construction jobs at UN11.

The finished OP is a symbol of the effort made by the Engineer Platoon. It is a job which reflects the hard work and dedication put in by all concerned. During this venture, 1,300 bricks were used, together with 120 bags of cement, 120 bags of lime, 80 litres of paint, 30 m³ of sand, 35 m³ of stone, 80 m² of tiles, 85 m² of matchboard, five doors and five windows.

Led by the Engineer Officer, 1 Lt Wissinger, the ARGCON Engineer Team is composed of 16 men of different rank. Its role is to provide a combination of both construction and combat engineer services to Sector One. Apart from the daily maintenance requirement, these services include construction design, fire prevention and technical assistance, as well as mine and booby-trap counter measures.

The real challenge was to use material and construction standards different from those used in Argentina. The men also had to deal with high temperatures and with the difficult mountainous terrain in the western part of Sector One. They quickly learned how to adapt themselves to this new environment in order to reach their final objective - to support every single soldier serving on the line.

ARGCON engineers in the process of renovating UN 11

On 18 July 1997, Lt Col Johann Trummer took over duty as Chief Operations Officer in HQ UNIFCYP.

Lt Col Trummer joined the Theresian Military Academy in Wiener Neustadt as an army cadet in 1982, and was commissioned as Lt to an Infantry Regiment in 1986. At the beginning of his military career, he served as a platoon leader and as Coy Commander of an Infantry Coy. From 1989 to 1991, he was posted to the Ops Branch of a logistics regiment.

From 1991 to 1994, he attended the General Staff course in Vienna. For the next three years, he was posted to the MOD in Vienna for special projects. He was then the Deputy Logistics Officer in the III Mechanized Corp, and for the last two years, he served as a tactical instructor at the Military Academy in Wiener Neustadt. He also worked as a trainer in the staff officers' courses for peace-keeping operations. His posting with UNIFCYP is for two years.

Lt Col Trummer is married to Norma and they have a 15-month-old son, Bernd. Lt Col Trummer enjoys skiing, soccer and horse riding. He is also a very experienced alpinist.

THE BLUE BERET

CHIEF OPERATIONS OFFICER
LIEUTENANT COLONEL JOHANN TRUMMER

COMMANDER IRCIVPOL
CHIEF SUPERINTENDENT MICHAEL DUFFILY

Michael Duffily was born in County Roscommon, Ireland, in 1938. He was educated locally and joined An Garda Siochana (Ireland's National Police Service) in September 1963.

Following completion of training, Ch Supt Duffily was assigned to the Dublin Metropolitan Area. He has served in the Special Detective Unit, Dublin, and seen service in Cork City as well as border duty. In 1975, he was allocated to the National Security Branch, Police HQ, as an Intelligence Analyst.

In the period 1974 to 1987, Ch Supt Duffily advanced within the security section to the position of Detective Superintendent in charge of the National Intelligence section.

In 1987, he was appointed as Private Secretary to the Garda Commissioner, a position he held until 1991 when, on his promotion to Chief Superintendent, he was appointed Deputy to the Metropolitan Commissioner with special responsibility for Administration and Planning.

In early 1994, he was appointed Head of the National Security Section at Garda HQ, Dublin.

Apart from national responsibilities, this position required active participation at EU level in the various committees and working groups held on International Terrorism, resulting in much travel and liaison with senior police and security service personnel throughout the world. Ch Supt Duffily retained this position until his appointment as Commander IRCIVPOL.

MEMORIAL SERVICE FOR UNIFIL SOLDIER

A 27-year-old soldier serving with the Finnish Battalion in South Lebanon, Staff Sergeant Marko Grondahl, tragically lost his life in a traffic accident on 25 July 1997 while on leave in Ayla Napa.

At a memorial service held at Santa Maria Catholic Church in Larnaca on Friday 1 August 1997, the Force Commander placed a wreath in the UN flag draped coffin and the Finnish Contingent Commander, Maj Jukka Seitaari, laid a wreath. The service was conducted by Rev Franz Goldenitz, the AUSSCON padre. Military honours were rendered by an AUSSCON honour guard and pallbearers under the command of Capt Rudolf Peschl before the coffin departed for Larnaca Airport and shipment of the coffin to the late soldier's home in Finland.

UN 25 - Repair work taking place after the storm which destroyed the roof in May
UNFICYP'S HELPING HANDS

WAYNE'S LUCKY 13TH DIVE!

Lldr Wayne Gregory, 29 years old from 5th Regiment Royal Artillery and currently serving on the Green Line, saved the life of a Swedish diver on Saturday 26 July 1997.

Wayne had just completed a dive off the wreck Zenobia near Larnaca as part of his Dive Master's Course. He had clambered back on board the boat, when one of the instructors brought a member of the group to the surface unconscious.

After pulling him on board, Wayne and a CYPOL serviceman, also on the boat, quickly reacted by carrying out mouth-to-mouth resuscitation. The Swedish tourist, a middle-aged qualified diver, had no pulse. He began breathing after an intense five minutes of cardiopulmonary resuscitation (CPR). Once ashore, he was taken by ambulance to hospital for tests and observation, where Wayne was told that the man had suffered a heart attack after panicking in the water.

It was lucky that Wayne was on board that day, and when asked about it, he smiled as he admitted: “It was my 13th dive in Cyprus too!”

CANS FOR KIDS

CANS FOR KIDS is an environmentally friendly way to save aluminium cans, the profits of which help provide much-needed equipment for the children's ward at the Makarios Hospital, Nicosia. 5 Regiment RA are actively saving Cans For Kids. Every troop has a collection point.

15 KM WALK IN AID OF THE CHERNOBYL CHILDREN'S PROJECT

On Sunday 11 May 1997, the second walk in aid of the Chernobyl Children’s Project took place, this time in Kyrenia.

The event was organised by BS Pat Kelleher. As before, the walk, which took place in Kyrenia last November, he gave a presentation on the disaster which occurred in Chernobyl in 1986 and on his experience in collecting for this charity. This time, pupils and teachers from local schools were also invited to participate together with members of UNFICYP. To everyone’s delight, the response was enormous.

The Force Commander led the 15 km walk, and the participants totted over 150 adults and children. It was a hot, humid day, so the water points along the route were most welcome. The humour was great and everyone enjoyed themselves.

An incredible amount of just over £9,500 sterling was finally collected. BS Kelleher has guaranteed to personally deliver this money in the form of aid to the people of Chernobyl who need it most.

There will be other events organised in aid of this charity and, with the enthusiasm and generosity shown by all in the past, it will again be a great success.

PYLA - THE UNHCR PHYSICAL DEVELOPMENT PLAN

Pyla, located in the Buffer Zone, is situated in a region of very ancient occupancy. Archaeological excavations in the area show that it was densely populated during the Bronze Age. Evidence of craftmanship in copper, gold and silver dating back to the 13th century BC has been discovered in the region.

The old village of Pyla, with a current population of approximately 1,600, is essentially a residential area with a medieval tower, one or two storied shops and houses often in relatively narrow streets. Parts of the old centre have been neglected and poorly developed, with many dilapidated and unsalable structures scarifying the general appearance of the village.

Pyla is unique in one major aspect: both Greek Cypriot and Turkish Cypriot communities live side by side and work together to solve the problems of their village. Following last year’s tragic events in Dhenia area, the rate of unemployment has risen amongst the Turkish Cypriot community.

Recently, in consultation with the local authorities, the UNHCR committed funds and commissioned an Urban Town Planner, Mr Henry Jacobs, for drawing up an Urban Development Plan for the old village of Pyla.

Mr Jacobs commenced work in April 1997 and worked closely with the local mukhtars and IRCIVPOL. He prepared a comprehensive set of proposals - the Pyla Physical Development Plan. This plan recommends a phased development of the old village area. Phase I involves the restoration of the Turkish Cypriot coffee shop located in the main square. Work on this commenced on 30 July 1997; eight local unemployed Turkish Cypriot men were hired for a job.

Phase I also covers the restoration of the Greek Cypriot Orthodox Church located nearby. Work on this commenced on 10 July 1997.

The Urban Development Plan for the old village centre of Pyla is designed to enable this ancient and nowadays highly symbolic area to resume its function for the benefit of both communities.

BEING PREPARED - CROWD CONTROL AND UNFICYP

Following the 1996 events at Dhenia area, during which two Greek Cypriots died, UNFICYP decided to review its practices and standards for dealing with violent and potentially violent civilan behaviour in the Buffer Zone.

Members of AUSTCIVPOL have recently completed a review of crowd control procedures for UNFICYP and, as a result, a new training package has been implemented to standardise crowd control methods.

Crowd control has historically been a police function and members of AUSTCIVPOL and IRCIVPOL have the necessary expertise to conduct the training programmes.

It is the responsibility of the military and police elements of the two sides to deny civilian access to the Buffer Zone. UNFICYP’s task is to prevent those who do enter from reaching the opposing forces. This task becomes difficult when emotions are high and tempers flare.

To this end, traditional principles of crowd control formation and basic defensive skills are taught. However, in the new package, emphasis is put on measures to decrease danger of conflict. Crowd psychology, self management and media awareness are now integral in crowd control training.

UNFICYP’s response in demonstration situations must be based on an ethic of minimum force. This is of particular importance in view of the high media focus on this kind of events. UNFICYP must be seen to be acting decisively and effectively; its actions should be seen as just and firm. UNFICYP personnel must also rely more on skills of conciliation and negotiation in order to prevent incidents from escalating. In difficult situations personnel must control their feelings of anger and frustration in order to be able to deal effectively with highly emotional locals.

Last, but not least, the package deals with the important issue of members’ physical well-being, taking into account environmental stress such as heat and dehydration.
